Bootstrap and JQuery!

In this milestone, I implemented the Bulma CSS framework (rather than bootstrap) because I found it easier to work with and less bloated, which I briefly discuss in my loom video. I added a new logo in the navigation bar and utilized Bulma to create a drop-down menu to help organize my navigation for the website. I also separated my photo gallery into a separate page. I found a fun new utility called Miro to help design my wire frames and sitemap. Lastly I organized and tweaked my CSS style sheet to be less bloated since I'm now able to use the Bulma framework instead. I implemented JQuery beginning in milestone five so I already have that, however I did create a single function to run all the functions, which helps the scripts.js page easier to follow.
